FCC/CE Statements: This device complies with part 15 of the FCC Rules and standards including Low Voltage Device Directive 73/23/EEC.

EMC: Directive 89/336/EEC. It passed the subject tests by the authority concerned and is authorized to bear the CE mark.

GENERAL SAFETY INFORMATION

WARNING!

Read and understand all safety warnings and instructions. Failure to follow all safety warnings and instructions listed below may result in electric shock, fire and/or serious

SAFETY INSTRUCTION

- Save this User Manual for future reference.
- Use only the original accessories especially the power adapter and lithium battery provided by the vendor to avoid possible risks to health and property, and thus meet all related legal regulations.
- The camera fully installed on the push cable and the unopened control box are waterproof, however the keyboard and the DVR inside the control box are not. Do not expose them in water or rain when the control box is open, increasing the risk of electrical shock and damage to the device.
- Do not drop, knock, shake or press hard on the device, inappropriate behavior may damage the internal electronic circuit board or deform the lens shape.
- Do not disconnect the SD card/USB storage device while recording or playing back as this may damage the system and/or the SD card/USB storage device.
- Always backup your data before connecting your SD card to this system and remember that always backup the data after using this system to avoid data damage/loss or accidental deletion. Memory devices should not be considered as a long-term storage device.
- Keep the device and its accessories out of the reach of babies, toddlers, and children.
- When using the camera LED lights, do not use too close to human or animal eyes, particularly for babies, toddlers, and children to avoid injury.
- Do not use the unit to inspect environments known or suspected to contain exposed electrical wiring
- Do not use the unit in the presence of high voltage equipment, flammable or explosive liquids/gases, hazardous chemicals, superheated liquid or heavy dust.
- Do not try to use the camera head to clear obstructions. This System is a diagnostic tool, not a drain cleaner. Using the camera head to clear obstructions could damage the camera head or cause it to be caught in the obstruction.
- Never use the solvents to clean any part of the system. Substances like acetone and other harsh chemicals can cause cracking of the camera's waterproof ring and affect its waterproofness.
- When using the device, please place it on a flat surface to prevent the screen from closing suddenly, which may cause the sunshield to cause harm to the human body. Or the screen may collide with the USB flash drive in use, causing damage to the screen.

- Turn off the system if it is not in use and keep routine maintenance.
- Some countries have regulations concerning batteries disposal. Please follow all applicable regulations.

WELCOM

Thank you for purchasing our HIGH-DEFINITION PIPE INSPECTION CAMERA SYSTEM.

This pipe inspection camera system is designed as an HD real-time inspection camera to unveil the internal objects and/or structures with the illumination of the highlight LEDs, it is specially designed for pipelines, sewers, drains, ducts, chimneys, plumbing, buildings, swimming pool, milk pipes, water mains, cable pipes, central air conditioning, pipes ventilation systems and other plumbing related sites, and many more where a pipe inspection camera system is required.

This system is suitable for pipes with the inner diameter of 15mm-300mm (0.5"-12").

Ability to go through 90°bends in the pipe with inner diameter at:

1.2"/32mm (for 12.8mm camera with 4.8mm push rod)

1.8"/45mm (for 21mm camera with 5.3mm push rod)

2"/52mm (for 21mm camera with 6.8mm push rod).

3"/80mm (for 29mm camera with 6.8mm push rod)

3.2"/82mm (for 29mm camera with 7.2mm push rod)

FEATURES

- Camera diameter 12.8mm (with push rod cable diameter 4.8mm/5.3mm cable), 21mm (with 5.3mm/6.8mm cable), 29mm (with 6.8/7.2mm cable) and 39mm (with 7.2/9mm cable) are available.
- Camera head with sapphire glass lens cover and #304 stainless steel housing allows the camera to with stand repeated hits in various pipes.
- The LED brightness control button is used pulley button without breakpoint dimming.
- The whole system is waterproof when the camera head is installed and the control box is closed. >9"/13.3"IPS LCD color monitor with standalone power button to turn on/off the screen alone. >On-screen date &time stamp and distance counter.
- The meter counter reset button can recount the meter at any time as required.
- The Meter-Feet button can switch the length unit easily.
- Microphone for local audio recording, just one press on the audio button to turn on/off the audio recording.
- Wireless keyboard for text input on the real-time picture or video like a laptop's, very easy to operate.
- The external storage SD card slot or USB port to store still pictures or videos.
- The cable reel is out of the control box for easy cleaning and won't cause dirty in the box.
- Rechargeable battery lasts up to 7 hours of continuous work (9" DVR).
- Rotatable cable reel mounted in metal frame for convenient operation.
- All-in-One visual pipe inspection camera system with push rod fiberglass cable length 10/20/30/40/50/80/130m and diameter ϕ 4.8/5.3/6.8/7.2/9mm for options.
- Other optional functions:

1. 512Hz transmitter for 12.8mm/21mm/29mm/ 39 m m camera

2. Self-leveling for 21mm/29mm/39mm camera
3. 512Hz transmitter and self-leveling for 21mm/29mm/39mm camera
4. Wireless 2.4G 5inch monitor to synchronize viewing the host screen when collaborating with multiple people
5. The external super battery pack allows the machine to work continuously for 9 hours.

STRUCTURE

INTRODUCTION

Machine 1.0

- ① Camera head
- ② Cable reel with meter counter
- ③ Control box
- ④ Metal frame and its accessories

- ⑤ Connection cable
- ⑥ Camera skins
- ⑦ Pothook holder and Pothook

Machine 2.0

- ① control box 2.0
- ② Dual cable reel with meter counter
- ③ Camera head
- ④ Brake system

- ⑤ Battery pack
- ⑥ Level Telescopic Handle
- ⑦ Double spinner wheels

Control box:

Ports and others:

Control Box 1.0

Control Box 2.0

Super charger and battery pack:

4 Level battery indication
 9 Hours battery life
 Voltage: 18.5~20.5V (Max)
 Capacity: 4.5Ah
 Energy: 92.5W/h

4 Level battery indication
 Frequency: 50~60Hz
 Output power: 84W
 Output volage: DC-21V
 Output current: 4

Display control buttons:

-  Menu button: To enter menu/confirm the selection
-  Up and Down button: Up and down select/Increase and decrease
-  ESC button: Exit the current interface and return to the previous interface
-  Flip button: To flip and mirror the image, RD/RN/RU/LD
-  Power button: Power on/off the display only

Control board buttons:

-  Power button: Power on/off the whole system
-  LED pulley button: Rollup/rolldown to enhance/less the LED brightness
-  2.4G button: Turn on/off the 2.4G function
-  Channel switch button: Select the 2.4G channel to pair with the monitor
-  Audio button: Turn on/off the audio input
-  Camera button: Take picture/Pause or continue video playing
-  Video/OK button: Start video recording/Pause or continue recording/Confirm the selection
-  Pause button: Stop video recording/Stop video playing
-  Reset button: Set zero the meter counter
-  Meter-Feet switch button: Switch the meter unit from Meter to Feet or vice versa
-  Menu button: Enter menu
-  ESC button: Exit the current interface and return to the previous interface
-  Up and down button: Zoom in and zoom out/Up and down select/Increase and decrease
-  Left and Right button: Page down and page up/speed up and speed down
- SD card slot/USB slot for USB mobile hard disk: To insert memory device
- AV out port: Connect to a TV to get the same image from the display
- Loudspeaker: Audio output
- Keyboard: Wireless keyboard for text input on real-time image/video
- Switch button: Switch channel 1 and channel 2, each channel corresponds to a camera system.
- Battery Indicator: The green indicator light indicates that the external battery pack is connected and working. The indicator is off, indicating that the battery pack is out of power.

Single cable metal frame and its accessories:

Camera holder/stopper: Hold the camera head/stop the cable.

Bracket base: To protect the metal frame.

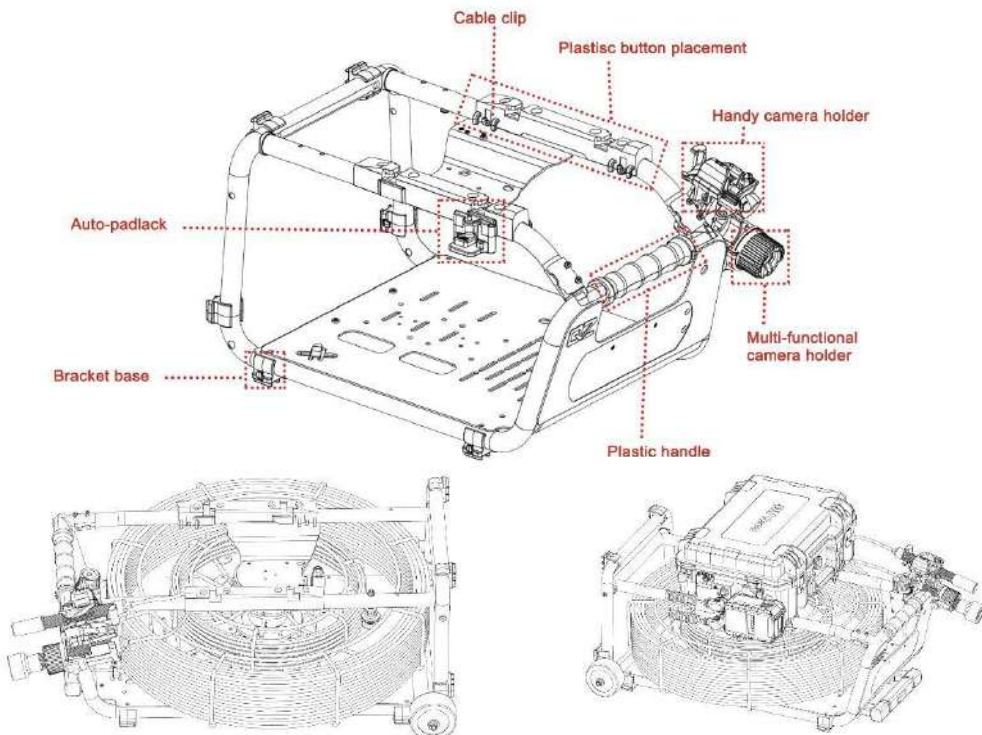

Plastic button placement: To install control.

box Cable clip: To tidy the connection cable.

Padlock: To automatically lock the control box.

Plastic handle: To reduce pressure and prevent slip.

Dual cable metal frame and its accessories:

INSTALLATION

Install cable reel to metal frame

Put the cable reel into the middle of the metal frame, align the 4 screw slots and fasten by 4 pairs of screws and nuts.

Install camera head

Pull out the fiberglass cable with connector through the hole and screw in camera head then put the camera head in the camera holder. Plug one end of the connection cable to the camera port in the reel and fasten the screw.

Install control box

Before install control box, settle the connection cable to the cable clip on the plastic button placement to make it tidy. Place the control box on the plastic button placement with the control box handle and metal frame handle in the same direction, then push forward the control box gently until there is a sound to indicate that the control box is automatically locked by the padlock. Plug the other end of the connection cable to the camera port in the control box and fasten the screw. Take out the pothooks and put into pothook holder, wind the connection cable around the pothooks to make it tidy.

Uninstall control box

Use one finger to press the padlock to the bottom while using the other hand to hold the handle of the control box and pull gently until the control box is loose to take out.

Uninstall

Install

Install camera skids

Camera skids are designed to support the camera and keep it in the middle of the pipe. There are 2 kinds of skids for 21mm camera head, 2 kinds of tool-less skids for 29mm camera head, 1 skid for 12.8mm camera head. Choose skid properly per application requirement.

46mm skid
For 2.5"-3.5" pipes

Sleeve the camera head with 46/78mm skid, then fasten each pairs of screws and nut by screwdriver

78mm skid
For 4"-8" pipes

65mm tool-less skid
for 3"-5" pipes

Sleeve the camera head with 65/105mm skid, then snap on by hand.

105mm tool-less skid
for 5"-10" pipes

25mm skid
For 1.5"-2" pipes

Sleeve the camera head with 25mm skid, then fasten screw by screwdriver.

BASIC OPERATION

Charge the device

Before you use the device for the first time, please make sure the power is fully charged. Plug the 12V power supply or car charger into the power charge port in the control box to charge, the power indicators will illuminate red to show in charging status, and it will turn off when the power is fully charged.

A full charge will be taken about 8 hours

Notice: You must use the original power supply or car charger provided by the vendor.

Install SD card/USB storage device

To insert the SD card (MAX.1TB) into the SD card slot, use your thumb and index finger to carry the SD card and insert into the SD card slot, then use your thumb to push gently until the SD card is locked with a sound. To take out the SD card, push the end of the SD card with your thumb, the SD card is unlocked and pop-up, then you can pull out the SD card. To insert USB storage device, insert the right direction of the USB socket into the USB slot to reach the bottom.

Notice:

1. Please insert the SD card/USB storage device before powering on the device.
2. The device can only identify one memory storage at a time, so just choose SD card or USB storage device before you work. If you insert both, the system defaults to choose SD card
3. If you insert the USB storage device with length more than 22mm, please remember to take it out before you close the control box to avoid damage on the USB storage device and the USB slot.

Install wireless keyboard

Take out the wireless keyboard and flip to the back, remove the battery cover, install 2XAAA batteries correctly, reinstall the battery cover, flip the ON/OFF switch to ON to power on, then reinstall the Wireless keyboard back to the control box.

**OPERATING INSTRUCTION****Safety Precautions:**

1. Please always wear protective gloves to operate the camera unit for safety reasons. Properly positioning the cable reel will save time and strength to push out/in the pipeline, while minimizing the rate of equipment damage.
2. When pushing the camera in the pipe, the end of your stroke should be as close to the entry as possible, but **DO NOT CONTINUE TO PUSH WHEN YOUR HANDS CATCH THE CABLE ON THE END OF AN ENTRY TO PREVENT YOUR HANDS STABBED**. Standing too far back with an excess of cable between your hands and the entry may cause the cable to fold on itself outside the entry and damage the cable.
3. Try to keep the push cable away from sharp edge of a pipe entry because this may cause damage. If the camera does not seem to go any farther, **DO NOT FORCE TO PUSH THE CAMERA!** Try another entry if possible.
4. The larger the cable diameter, the greater the elasticity. **PLEASE BE MORE CAREFUL WHEN YOU OPERATE THE CAMERA UNIT WITH 6.8MM FIBERGLASS ROD TO PREVENT THE CABLE REEL POP OUT AUTOMATICALLY TO GET HURT YOURSELF AND THE PEOPLE/OBJECTS AROUND**
5. Always try to inspect the pipe with the same direction of water flow, this will keep the camera clean, and allow you to push noticeably farther with less friction. If the water is preventing you from seeing an area of importance, stop and temporarily turn it off
6. Always try to push the push cable through the pipeline steadily and slowly, with a short distance entry per time, keep the hands at the pipeline entrance, so that can control the push cable and prevent it stuck, bent or scratched.
7. When inspecting a pipe with changes in direction such as P-traps, S-traps, Tee's, Y's, crossovers, elbows, etc., it is necessary to give a little extra pushing force to go through the changes. Pull back the camera head about 20cm/8" from the bend and give it a quick push (if necessary) to pop-up the camera to go through the turn rapidly by using the minimal force.
8. Make sure the sapphire cover is clean enough before inspecting. A slight film of detergent on the sapphire cover may minimize the possibility of grease sticking to the cover. If necessary, take advantage of any standing water in the pipe to wash the camera head by jiggling it in the water
9. As the materials of pipe are vary, it will be necessary to adjust the lighting settings to maximize picture quality when you place the camera head into the pipe.
10. The camera can go through multiple 45 and 90-degree bends and wyes, but do not try to force it to go through a P-trap or Tee if there is a large amount of resistance.
11. Do not attempt to remove or store push cable on the reel solely by turning the reel itself. You can manually pull or push the cable from the reel and wind or unwind it.
12. The camera with LED lights on stays in the pipe or confined space will be easy to generate heat, this may cause the fuzzy lines to appear on the monitor. In this situation, please turn off the system, take out the camera from the pipe or confined space for 10-15 minutes to cool the camera head. Running water into the pipe may also help to cool the camera head. Always use the minimum illumination required to maximize picture quality and avoid excessive heat generated to protect the camera head.
13. When you finish your inspection work, or take a prolonged break while working, turn off the system for power saving.
14. Operating environment:
 - (1) The camera system operating temperature is between -10°C ~ 50°C (14°F ~ 122°F). It is normal for the operating time to be shortened when the temperature is low.

(2) Storage at too high or low temperatures will also result in a gradual battery capacity loss. As a result, the operating time of your inspection system may be considerably reduced.

(3) It is normal for the camera system to become warm during operation, because the inspection system casing can conduct heat.

1. Preparation

Place the system in a flat place, open the control box, adjust the sunshade to the appropriate position.

2. Power on the device

Press and hold the **Power button**  on the control board for 3 second to power on the unit and illuminate the LCD. The power indicators beside the power button and out of the control box will turn green, the battery capacity indicator will light up to show the battery capacity (When the battery meter showed one bar of power left and flickering, it indicates that the battery is low and needs to be charged as soon as possible). When illuminating the LCD, the Screen will show on "NO SIGNAL" with blue background for 5 seconds and "WELCOME" for another 5 seconds with white background, then enter the real-time image. The lower the battery, the longer it takes.

After entering the system, the date and time is shown on the upper left corner, the storage icon and capacity information is shown on the upper right corner.

3. Camera inspection operating

Take out the camera from the camera holder, one hand to hold and control the reel speed, the other hand to point the camera head at the target entrance of the pipe, slowly pushing forward. When retrieve the push cable, one hand to pull out the cable slowly, the other hand to take up the cable backward to prevent being stacked and intertwined

When storing the push cable, hands should be close to the cable reel and push the cable with a short length every time. Push a long distance can cause the push cable bend or broken.

4. Meter counter operating

When you pull out the cable with the reel rotating, the meter counter will begin to work and the meter data will be shown on the lower right corner. You can switch the meter unit from meter to feet by pressing the **Meter-Feet switch button**  or start to measure the meter from 0 at a certain distance by pressed the **Reset button** .

Notice:(1) To decrease th0e deviation of the meter counter, turn on the system before you pullout the push cable from the cable reel. (2) The deviation ofmeter counter will be increased if the total length ofcable is changed more than 3meters, you need to change the default perimeter value to decrease the deviation.

5. Photo and video operating

Press the **Camera button**  to take a picture, a camera icon will be shown in the middle of the display to indicate the capture is successful and stored. Press the **Video button** or **OK button**   to start recording a video, a red recording icon with recording time will be shown on the lower left corner to indicate the recording status. In recording status, press the **Video/OK button**   to pause the recording, press again to continue recording; press the **Camera button**  to capture a picture; press the **Audio button**  to turn on the audio recording, press again to turn off; press the **Up button/Down button**   to zoom in and zoom out; press the **Stop button**  to stop the recording.

6. Wireless keyboard operating

The receiver is default installed in the control board and paired with the wireless keyboard. Press the blank key (or the other keys available) to display the >_ on the image, the white cursor flashing, you can begin to type 48 characters for each line and 15 lines in total in an image.

Notice:

(1) Not all the keys on the keyboard are available to use in this system, but it doesn't affect you to input the English characters including letters, numbers and symbols, special keys set with special functions: F5: Prohibit input; ESC: Release the prohibit input; F7: Clear all input characters on the display.

(2) Both picture and video can be input text and saved with the picture and video.

(3) When the battery indicator on the wireless keyboard is flashing, it indicates that the low power please replace the battery in time, otherwise the keyboard will stop working or can't type characters properly.

(4) When you change a new keyboard, please change the receiver together

7. Playback videos/pictures

Press the **Menu button**  on the control board to enter MAIN MENU, then select PLAY AVI and press OK button to enter the VIDEO PLAYBACK status. Press **Up/Down button** to move up or down to select the target file, press the **Right/Left button**   to page down and page up. Once select the target file, press **OK/Video button** to play video, press the **Camera button** to pause play, press again to

continue playing; press the Stop button to finish the play; press the **ESC button**  to quit playing and return the previous interface. In playing video status, press the **Up/Down button** to enlarge/decrease the volume; press the **Right/Left button** to speed up/down the video playback speed (Rate at X2, X4, X8, X16, X32).

In MAIN MENU status, select PLAYJPEG and enter the PICUTRE PLAYBACK status. Select the target picture to playback.

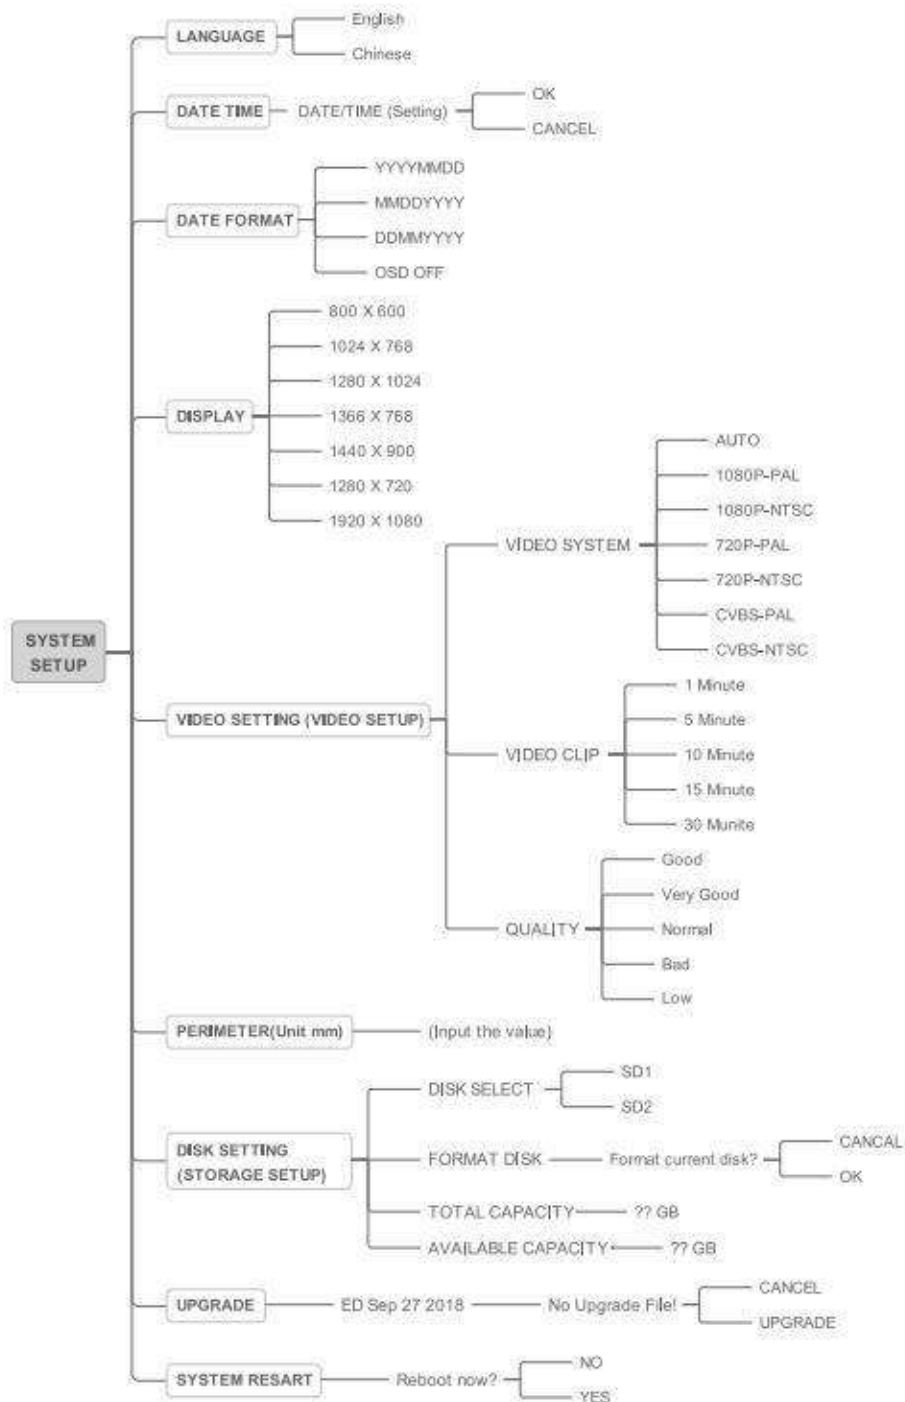

8. Deletion operating

To delete the video/picture, you can only delete the file in the single file listed by pressing the Stop button. It will pop up a prompt "Do you want to delete this file?", you can choose "NO" to cancel the deletion, or "YES" to confirm the deletion.

9. System setup

In MAIN MENU status, select SYSTEM SETUP to enter the setting interface. Follow the flow chat to set up the language, date/time, date format, display resolution, video system/length/quality, perimeter, disk format, upgrade system and system restart.

Notice: The perimeter is set according to the total length and diameter of push cable and the diameter of the reel, please don't change the default value to reduce the error rate of the meter counter unless you change the above elements.

10. Display setup operating

Press **Menu** button  on the display control board to enter the display settings. Press **Up/Down** button  to select the setting; press the **Menu** button to confirm the selection; press **Flip** button  to flip the screen (9inch display)/Press **ESC**  to exit the setting and return to last interface (13.3inch display), press **Power** button  to power on/off the display only.

For 9inch display settings:

11. **2.4G monitor operating (optional function)**

If your system supports a 2.4G monitor, install the antenna first to get better signal (The antenna port is outside the control box on the left.). Press the **2.4G button** to turn on 2.4G function, the indicator beside it will turn green. Press the Channel **switch button** to pair with the monitor. (There are 2 Channels for options.)

For the operation of the monitor, please refer to the User Manual of 5" TFTVIDEO MONITOR.

12. **512Hz transmitter (optional function)**

When using the 512Hz receiver to search the camera with the 512Hz transmitter, set the sensitivity according to the distance, the closer to the camera head, the lower the sensitivity. The deviation is about 10CM.

512Hz Transmitter	Frequency	512±2Hz
	Transmit Mode	Constant
	Transmission Distance	Up to 7 meters in open area

Note:

- ①. When you choose the 512Hz transmitter function, the 512Hz sonde comes on/off automatically when powered up/down.
- ②. When the 512Hz sonde comes on, any locator that picks up a 512Hz signal will work with it.

13. **End of work**

When ending the inspection work, press the **Power button** on control board for 3 seconds to turn off the system and close the sunshade before closing the control box.

TROUBLESHOOTING

Problems	Possible Causes	Likely Solutions
No Image	Connection cable is faulty or loose	Check the connection cable, clean and reconnect if necessary
	Camera connector soiled	Clean the camera connector
	Black Screen	Screen switch off, turn on again
	The front-end cable connector was damaged/broken/pulled off	Replace front end cable connector
	The connection cable is damaged	Replace the connection cable
	Water inside the camera head	Replace the camera head part
	Spring part of the camera damaged	Replace the spring part
	Camera head connection pins	Replace the camera head part
DVR can not boot	No Power	Recharge
	Display power connection is faulty or loose	Check the display power connection, reconnect if necessary
	Charging circuit fault	Replace PCB
	The switch circuit is faulty	Replace PCB
	Core board seat contact is poor/damaged	Check the contact seat/replace the core board
Can not input characters	The wireless keyboard is not powered	Correctly install the 2 AAA batteries and switch the power button to ON
	The wireless keyboard has low battery	Replace the batteries
	Wireless keyboard or receiver fault	Check the keyboard and receiver on PC
	The keyboard cannot enter letters or numbers	Restart the system
Meter counter is not accurate	Knurled wheel slip	Fit push cable into the guide slot and hook
	Not set to zero	Press reset button to set zero
	Pull out the push cable before power on the system	Power on the system before pulling out the push cable from the cable reel
	The setting of distance counter is changed	Reset the perimeter value: QY6566:9700(mm) QY6688:11200(mm)
Can not play some AVI videos	These AVI videos are not recorded by the system	Play videos on another device supported like PC or smart TV. This system can only replay videos created from the record function.
	Wrong SD card/USB storage device	Turn off and replace the storage device
	The storage device capacity is not displayed	The slot contact problem, need to repair or replace a new one SD card/USB flash drive is damaged, need to repair or replace a new one
	Does not read the SD card/USB flash drive information	Format the SD card/USB flash drive in the system

MAINTENANCE TIPS

1. If you haven't used this system for a long time, please charge it every 6 months to ensure the battery is in normal working status.
2. To avoid unclear images, be sure to clean the inspection system lens before taking pictures or recording videos. Use a lens brush or soft cloth to clean the lens.
3. Before initial use of a memory device, it is recommended to use the system to format first so as to make it more conducive to the system.
4. Do not force the misplaced SD card/USB storage device into the SD card/USB slot, and do not force to pull out the SD card from the slot directly.
5. When the machine is not in use, please place it in a dry, dust-free, temperature-appropriate environment, away from flammable objects and chemicals.

WARRANTY INFORMATION

We warrant its instruments and accessories against defects in material or workmanship for one year from the date of purchase. We will replace or repair the defective unit, at its option, subject to verification of the defect.

The warranty becomes void if any physical damage is present or if the system is disassembled by the user. Warranty is void if damage or system failure occurred due to outside factors such as collision, fire, flood, dirt, sewage, earthquake, and other force majeure events as well as incorrect usage of electricity or use of non-original accessories. It is the sole responsibility of the user if problems (such as data loss and system failure) occur due to non-factory installed software, parts, and/or non-original accessories.

This warranty does not apply to defects resulting from abuse, neglect, accident, unauthorized repair, alteration, or unreasonable use of the product.

Any implied warranties arising from the sale of a product, including but not limited to implied warranties of merchantability and fitness for a particular purpose, are limited to the above. We shall not be liable for loss of use of the product or other incidental or consequential damages, expenses, or economic loss, or for any claim of such damage, expenses, or economic loss.

State laws vary. The above limitations or exclusions may not apply to you.

Products and accessories purchased from our authorized agents are also entitled to one-year free warranty service if the damage is not caused by human factors and is verified by the agent and does not meet the above conditions. For maintenance matters you can directly contact the agent.

RETURN FOR REPAIR POLICY

Every effort has been made to provide you with a reliable product of superior quality. However, in the event your instrument or part of the instrument requires repair, please contact our Sales to obtain a Return Goods Authorization. Not all units are returnable. A modified unit cannot be returned under any circumstances. We reserve the right to final judgment on all product returns.

All the graphics and specifications included in this usermanual are subject to minor change without prior notice.
